Smarter Lifestyle Eco Living

With a nod to the increasingly interactive nature of our homes, German Pool launches the exclusive Smart Control system, which controls compatible water heaters and fosters a greener lifestyle via an intuitive iPad interface.

Smart Control system Extra convenience and smarter resources control. One iPad can control up to 10 compatible instantaneous water heaters

Performance Statistics
Cost summary, water usage and energy consumption data are shown

Global carbon emission has reached a critical point. In fact, everyone can do their bit to help make the world a greener place. One of the most fuel consuming appliance in the home has got to be the conventional storage water heater.

An average short shower can use up to 10L of water. For a bulky storage electric water heater, a full tank of water is heated beyond the temperature of need, before it is cooled at the tap by mixing with a cold stream. This is a wasteful use of electricity. In fact, when you switch to an energy efficient instantaneous electric water heater, you can save up to 50% of electricity!

German Pool – Hong Kong's premier choice of water heater provider with 33 years of expertise – has expanded their Instantaneous Electric Water Heaters family with three exciting new models: the CFX21, CEX21, and the GPI-M8. All of these models are 100% engineered and made in Germany using world-leading technology.

The two ultra-petite CFX21 and CEX21 are small enough to be ceiling-mountable, perfect for preserving interior design integrity. Despite their small outlooks, the two brand new models are multi-point applicable, meaning that they can deliver accurate hot water to the bath, the shower, and wash basins in the kitchen or bathrooms.

GPI-M8, on the other hand, is small, powerful and innovative. The GPI-M8 is many a first: it is the first model in German Pool's line of mini

heaters to adopt full electronic control. This means that the GPI-M8 can deliver precise hot water at 35°C, 38°C, and 45°C instantly, wasting no energy storing pre-heated water, therefore saving energy of up to 85% when compared to a traditional 5L boiler.

Not only are CEX21, CFX21, and GPI-M8 compatible with solar heating panels to help further reduce carbon emission, they are all controllable via the unprecedented Smart Control app – an industry's first.

German Pool's Smart Control system allows the adjustment of personal settings on all compatible German Pool instantaneous electric water heaters via an iPad.

Users can retrieve individual settings, adjust temperature, and look at water or energy consumption at a glance via an iPad app.

Furthermore, the Smart Control iPad app also lets you define saving targets; the graphical summaries of water and energy usage offers detailed insight for eco evaluation. German Pool's Smart Control system is designed to maximise the convenience and the environmental friendliness of any smart homes.

The threat of global warming is imminent and real. Act now to start help make the world a greener place! **German Pool Kowloon Flagship Store** | Room 2-4, Upper G/F, Newport Centre, 116 Ma Tau Kok Road, Tokwawan, Kowloon | 2773 2828 | www.germanpool.com
