## Product Structure

## Operation Instructions

### **WARNING!**

DO NOT immerse the Dehumidifier or the product base of this product in water to avoid damage to the product or electrical leakage.

### **Before Use**

1. Check if the output voltage of the power socket is consistent with the voltage of this product.
2. Check if the power cord is in good condition.
3. Check if the silica gel in the display window is orange.

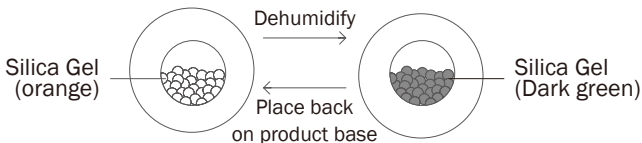

### **Note:**

Before use, please check the display window on the top of the Dehumidifier and see if the silica gel inside is orange color or not. If it is orange color, the product is ready for use. If the gel is dark green color, please put the Dehumidifier on the product base, turn on the power and let it heat until the gel turns orange.

### **How To Use**

1. Turn on the power, the indicator light on the base will blink white. Place the Dehumidifier on the base, and the indicator light will light up constant in green.
2. When the silica gel in the display window is orange, it means the product can start dehumidification. Remove the Dehumidifier from the base, and place the Dehumidifier in the closet, cabinet or any space you wish to dehumidify.
3. When the silica gel in the display window is dark green, it means that the product is full of moisture. Put the Dehumidifier on the product base and heat it for two hours. After 2 hours, the product will automatically switch off and enter standby state. The indicator light will blink in white, meaning the gel-drying cycle is completed. The silica gel in the display window will have changed back to orange, which means that the silica gel has been completely dried, and the product can be reused for dehumidification again.

## Operation Instructions

### Note:

Due to different ambient environments, if after one gel-drying cycle (2 hrs), the silica gel in the display window still has not changed back to orange, it means that the silica gel is not completely dried yet. Lift the Dehumidifier off the product base for more than 3 seconds, then reset it on the base to power on and heat again until the moisture in the Dehumidifier is completely removed and the gel in the display window has changed to orange.
